Customer Churn Analysis – One Page Summary

Project Overview

This project analyzes telecom customer churn using Python (Pandas, Matplotlib, and Seaborn). The goal is to identify the key factors influencing customer attrition and provide insights that help businesses improve retention strategies.

Key Insights

- Overall churn rate is approximately 26.5%, meaning about 1 in 4 customers leave the service.
- Month to month contract customers have the highest churn (~42–45%), while two year contracts have the lowest (~3%).
- Senior citizens show higher churn (~41%) compared to non senior customers (~23–24%).
- Fiber optic internet users have higher churn (~41%) compared to DSL users (~19%).
- Customers paying through electronic check have the highest churn (~45%), while automatic payments show lower churn (~15–17%).

Business Recommendations

- Promote long term contracts to reduce churn.
- Improve onboarding experience for new customers.
- Encourage automatic payment methods.
- Promote value added services like Online Security and Tech Support.
